

# Tec-Shield Elite CLP

## Weapon Cleaner Lubricant Protectant

### ***Odorless cleaner and dry lubricant in one.***

Try this cleaner/lubricant/protectant on your firearm once and you'll never use anything else. It cleans surface rust, carbon, black powder, copper and lead fouling, leaving behind a dry lubricant that won't allow rust or build-up of any kind.

Also great on knives, archery equipment, fishing and camping gear, tools and machinery, and more.

### ***The Tec-Shield Elite difference: How it works.***

Firing a gun creates more heat, friction, and pressure than most lubricants can handle. That's because lubricants burn-off and stop working at fairly low temperatures.

**Tec-Shield Elite's** dry lubricant has a distillation range from 600–800 degrees F. Once the water carrier has burned off, this synthetic-based lubricant dries and plates into the pores of the firearm—creating a boundary that carbon and debris can't cling to.

***Before***

***After***

*As you wipe down the firearm, Tec-Shield Elite will only "plate out" on scarred areas. This plating out effect takes place at approximately 125 degrees F—just when other solvent-based cleaners are burned off.*

### ***Why Tec-Shield Elite at a glance.***

- ★ **Cost-effective cleaner and lubricant in one**
- ★ **Dry lubricant repels dirt and sand**
- ★ **Inner barrel conditioning improves weapon accuracy**
- ★ **Decreases barrel heat under rapid fire conditions**
- ★ **Works on all metals and finishes**
- ★ **Won't harm weapon stocks of any type**
- ★ **Lubricates and greatly extends the life of moving parts**
- ★ **Can be used without ventilation**
- ★ **Can be used in Ultrasonic Cleaners**
- ★ **Non-Hazardous**
- ★ **Biodegradable**
- ★ **Water Based**
- ★ **No VOC's**
- ★ **Non-flammable; not a solvent**

## Important details

**Tec-Shield Elite** is a water-based compound designed to clean metallic surfaces and guard against corrosion and mechanical wear. It provides dry boundary lubrication, friction reduction, and a sustained barrier protection, leading to longer in-use times for equipment, lower maintenance costs, and fewer catastrophic failures.

High temperatures and mechanical pressures associated with bolts, bearings, muzzles, barrels, and triggers will further activate Tec-Shield Elite, providing an enhanced and durable surface that resists mechanical wear. For you, that means a cleaner, more precise weapon with reduced mechanical jamming, malfunctions, and carbon build-up. Continued use will yield higher muzzle velocities, better cooling properties, and superior accuracy due to significantly reduced carbon build-up.

For use on equipment ready for use in field or to treat parts separately for assembly.

**To use:** Apply to equipment as needed, remove excess material with an adsorbent cloth, and allow application to dry. **Do not soak equipment.**

Environmentally safe, contains no hazardous materials or CA Prop 65 components, and all ingredients are TSCA registered.

### Applications:

#### ★ Weapons

Pretreatment of handguns and rifles for extended use in the field under adverse conditions. Immediate remediation of compromised arms infield.

#### ★ Pretreatment in lapped joints

Corrosion reduction between dissimilar metals in storage and in use.

#### ★ Heat treatments

Apply on heated metal surfaces for extended superior coating properties.

#### ★ Commercial infrastructure

Rebuild on site bridges, guardrails, signs, drains for longer maintenance-free timeframes.

#### ★ Ocean vessels:

Significant reduction of corrosion from salt spray on exterior surface
