

TecShield RTU

Our lubricants are utilized in the production and placement areas of hot mix, from the mixing drum, slat conveyor, transfer slats, silo gates, truck bed lubrication and all lay down equipment such as MTV's pavers, rubber tire rollers and tools. We have manual and automated systems for all applications.

Tec-Shield RTU's MSRP is priced by quantity sizes at \$9.95 to \$11.95 per gallon, and dilutes from 5:1 with water to start. [We have customers using Tec-Shield RTU at 20:1 and higher after repeated use.](#) Because of the 600 to 800 degrees F distillation range of Tec-Shield RTU, one diluted gallon will last longer than 8 to 10 gallons of diesel fuel. Biodegradable Tec-Shield RTU is the answer. Tec-Shield RTU prevents asphalt from sticking to metal and rubber surfaces in the first place, therefore cleaning becomes much easier. Tec-Shield RTU cleans slowly with minimal solvency while bonding and plating out on metal and rubber surfaces and remains biodegradable. Once Tec-Shield RTU is established on these surfaces, asphalt will not stick and the lubrication properties provide extended life to treated components.

Our technology is recommended by other leading equipment manufacturers such as Roadtec, Inc., Thermolay, Volvo Road Machinery, Voegele, and has been written into DOT specs in Illinois for rubber tire rollers. Tec-Shield is also recommended by top road construction companies across the United States and in Canada. Lakeside Industries, Issaquah, WA, Montreal Tracteur, Inc., Quebec, Rieth-Riley Construction Company, Inc, throughout the Midwest, just to name a few.

Tec-Team has been in business since 1995 manufacturing synthetic-based, dry-lubricant chemical technology manufactured under ISO 9002 Certification. Our products are focused on performance, economy, the environment and worker safety.
